

LEGALEASE

1. Brainstorming & Ideation Phase

LegalEase: AI-Powered Legal Document Generator

PROJECT TEAM

- Nikkath Khatoon (Team Leader)
- Nowfel.M
- Snehan.P
- Joel.J
- Arfana Begum

1. Reference Basis

Prepared using the supplied Periyar University-style reference format and the supplied LegalEase project document. The reference structure covers project title/description, use cases, architecture, prerequisites, objectives, workflow, milestones, testing, deployment, results, limitations, future enhancements and appendix. The LegalEase source describes an AI-powered legal document generator using Streamlit, FastAPI, Gemini integration and TXT/DOCX/PDF export.

2. Problem Identification

Common legal documents can be difficult and time-consuming to prepare for users without a legal background. LegalEase proposes an AI-assisted workflow for generating structured drafts from user inputs.

3. Brainstorming Goals

- Simplify common legal-document drafting
- Use generative AI to create structured drafts
- Provide editable output
- Support professional formatting
- Enable TXT, DOCX and PDF export

4. Ideas Considered

- Template-based document generator
- AI legal-document generator
- Legal text summarizer
- Clause explanation tool
- Document formatting and export utility

5. Selected Idea – LegalEase

LegalEase was selected because the supplied project combines AI generation, editable preview, document formatting, branding and multi-format export in one application.

6. Target Users

- Entrepreneurs and startup founders
- Freelancers and professionals
- Landlords and tenants
- Individuals needing common document drafts
- Educational users

7. Proposed Features

- Document type
- Parties involved
- Terms and conditions
- Effective date
- AI generation
- Editable preview
- TXT/DOCX/PDF export
- Logo and footer branding

8. Expected Outcome

A working academic prototype demonstrating how generative AI can turn structured user inputs into editable legal-document drafts.
