

LEGALEASE

6. Project Testing Phase

LegalEase – Testing and Validation

PROJECT TEAM

- Nikkath Khatoon (Team Leader)
- Nowfel.M
- Snehan.P
- Joel.J
- Arfana Begum

1. Testing Objective

Prepared using the supplied Periyar University-style reference format and the supplied LegalEase project document. The reference structure covers project title/description, use cases, architecture, prerequisites, objectives, workflow, milestones, testing, deployment, results, limitations, future enhancements and appendix. The LegalEase source describes an AI-powered legal document generator using Streamlit, FastAPI, Gemini integration and TXT/DOCX/PDF export.

2. Testing Strategy

- Unit testing
- Integration testing
- System testing
- User acceptance testing
- Validation and error handling

3. Test Cases

- TC-01 Valid input → document generated
- TC-02 Missing document type → validation message
- TC-03 Valid generation → preview displayed
- TC-04 Edit → changes retained
- TC-05 TXT export → file opens correctly
- TC-06 DOCX export → formatted file
- TC-07 PDF export → formatted file
- TC-08 Invalid API configuration → controlled error

4. Performance Checks

- Monitor generation response time
- Verify usable frontend response
- Verify exported files open
- Check formatting consistency

5. Security Validation

- Keep API key in environment variables
- Do not commit secrets
- Validate user input
- Avoid unnecessary internal-error exposure
- Treat generated legal text as a draft requiring appropriate review

6. Acceptance Criteria

- Required inputs work
- Generation works for valid requests
- Preview is readable
- Editing works
- TXT/DOCX/PDF downloads work
- Configuration is secure

7. Evidence to Capture

- Input screen
- Generated preview
- Edited preview
- TXT output
- DOCX output
- PDF output
- Backend health check
- Completed test table
