

LEGALEASE

7. Project Documentation Phase

LegalEase – Technical and User Documentation

PROJECT TEAM

- Nikkath Khatoon (Team Leader)
- Nowfel.M
- Snehan.P
- Joel.J
- Arfana Begum

1. Documentation Purpose

Prepared using the supplied Periyar University-style reference format and the supplied LegalEase project document. The reference structure covers project title/description, use cases, architecture, prerequisites, objectives, workflow, milestones, testing, deployment, results, limitations, future enhancements and appendix. The LegalEase source describes an AI-powered legal document generator using Streamlit, FastAPI, Gemini integration and TXT/DOCX/PDF export.

2. Report Structure

The supplied reference organizes project documentation around title, description, use cases, architecture, prerequisites, objectives, workflow, milestones, testing, deployment, project structure, results, limitations, future enhancements, conclusion and appendix.

3. Technical Documentation

- Architecture
- Technology stack
- Installation prerequisites
- Module responsibilities
- API endpoint
- AI integration
- Formatting utilities
- Configuration and deployment

4. User Documentation

- Select document type
- Enter parties
- Enter semicolon-separated terms
- Enter effective date
- Generate
- Edit
- Download TXT/DOCX/PDF

5. Demonstrated Document Types

- Agreement
- Contract
- NDA
- Lease Agreement
- Employment Offer Letter
- Freelance Work Contract

6. Output Documentation

LegalEase supports TXT, DOCX and PDF outputs, with branding such as logo and footer described for formatted outputs.

7. Limitations

- AI output requires appropriate human review
- API/model availability can affect generation
- Unusual structures may require formatting adjustments
- Legal requirements vary by jurisdiction

8. Future Enhancements

- Deeper contract analysis
- Legal database integration
- Personalized recommendations
- More multilingual support
- Cloud deployment
- Mobile integration
- Automation and scalability
