

LEGALEASE

8. Project Demonstration Phase

LegalEase – Final Demonstration Plan

PROJECT TEAM

- Nikkath Khatoon (Team Leader)
- Nowfel.M
- Snehan.P
- Joel.J
- Arfana Begum

1. Demonstration Objective

Prepared using the supplied Periyar University-style reference format and the supplied LegalEase project document. The reference structure covers project title/description, use cases, architecture, prerequisites, objectives, workflow, milestones, testing, deployment, results, limitations, future enhancements and appendix. The LegalEase source describes an AI-powered legal document generator using Streamlit, FastAPI, Gemini integration and TXT/DOCX/PDF export.

2. Setup

- Start FastAPI backend
- Start Streamlit frontend
- Verify environment variables
- Open LegalEase
- Prepare sample scenario

3. Demonstration Scenario

Use a freelancer NDA scenario: enter document type, parties, confidentiality terms and effective date; generate, review, edit and download the document.

4. Step-by-Step Demo

- 1 Open LegalEase
- 2 Select document type
- 3 Enter parties
- 4 Enter terms
- 5 Enter effective date
- 6 Generate document
- 7 Show preview
- 8 Edit document
- 9 Download TXT
- 10 Download DOCX
- 11 Download PDF
- 12 Verify exported files

5. Points to Explain

- Why LegalEase
- Role of generative AI
- Role of Streamlit
- Role of FastAPI

- Role of GeminiDocumentGenerator
- How inputs become a prompt
- How formatting is applied
- How editing/export improve usability

6. Expected Result

The audience sees the complete flow from user input to AI-generated draft, editable preview and multi-format output.

7. Demonstration Checklist

- Backend running
- Frontend running
- API key configured
- Sample inputs ready
- Generate tested
- Preview tested
- Edit tested
- TXT tested
- DOCX tested
- PDF tested
- Screenshots captured
- Team roles prepared

8. Closing

LegalEase demonstrates an applied generative-AI workflow intended to improve accessibility and efficiency in common legal-document drafting.
